

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Amended) A review data retrieval system in which a server having a review database and a client retrieving and obtaining data of a desired review from the server are connected to a network, wherein:

said server has at least a title of a book whose review [or an introductory remark] is carried by a medium in the database and a name of the medium carrying the review [or the introductory remark]; and

at a request of the client, at least the title of the book and the [a] number of [times the review or the introductory remark is] reviews carried by the medium are output to the client through the network.

2. (Original) The system according to claim 1, wherein  
said server further comprises in the database the data of reading characters of a title of a book, a name of an author or editor, a name of a publisher, a name of a reviewer or selector to be output to the client through the network.

3. (Amended) The system according to claim 1 or 2, wherein  
said server further comprises in the database the data of a year and a month of a publication, a publisher, an issuer, a type, an ISBN code, a list price, and a price of a body of a first edition, a second impression, printing[, ] or revised version[, etc.] of a book to be output to the client through the network.

4. (Amended) The system according to claim 1 or 2, wherein

said server ~~server~~ further comprises in the database the data of a field of the book, a field, an issue date, a publication date, a magazine code, a listing year, month, and page of the review or the introductory remark of the medium on which the review or the introductory remark of the book is listed to be output to the client through the network.

5. (Previously Amended) The system according to claim 1 or 2, wherein said server further comprises a summary of contents of the book to be output to the client through the network.

6. (Previously Amended) The system according to claim 1 or 2 wherein said server further comprises a graphic database containing the graphic data of the cover of the book to be output to the client through the network.

7. (Amended) The system according to claim 4, wherein said server includes the database such that [it] can be retrieved [from] the client using a keyword indicating a name of a medium containing a review or an introductory remark, a field of the medium, a field of a book, or contents of the book.

8. (Original) The system according to claim 4, wherein said server outputs results of counting the number of processes of specifying retrieval by the client in the data for each medium on which a review or an introductory remark is listed, for each field of a medium, for each title of a book, for each field of a medium, for each title of a book, for each field of a book, for each author, for each publisher, or for each keyword to the client through the network.

9. (Amended) The system according to claim 1 or 2 [, 3, 4, 5, 6, 7 or 8,] wherein

said database is sequentially detected if a predetermined period has passed.

10. (Original) The system according to claim 1, wherein  
said server outputs data of a number of times of listing on a medium a review or an introductory remark for each book, for each field of the book, for each publisher, or for each author in a descending order within a predetermined term of listing the review or the introductory remark for each book, for each field of the book, for each publisher, or for each author.

11. (New) The system according to claim 1, wherein said medium is a magazine or a newspaper.

12. (Amended) The system according to claim 1, wherein said [medium is a magazine or a newspaper] client is a personal computer, a LAN terminal, or a mobile type communications appliance.

13. (Amended) The system according to claim 1, wherein [said client is a personal computer, a LAN terminal, or a mobile type communications appliance]  
said server outputs a plurality of reviews listed on the medium of the book together with the title of the book such that they can be displayed as a list to the client through the network.

14. (Amended) The system according to claim 1, wherein  
said server [outputs a plurality of reviews listed on the medium of the book together with the title of the book such that they can be displayed as a list to the client through the network] classifies the books based on the reviews and displays the books as a list and outputs the data to the client through the network.
